

# Waffle Pod Delivery & Site Recycling Protocol

## EPS Waffle Pod Delivery, Clean Up & Access Responsibilities

### Delivery of Waffle Pods

- Reasonable access via paved/safe roads to approach site is required, including access to site through multi-unit developments.
- Safe/legal parking access at the front of site is required.
- Unipod needs to be advised of any of the following before delivery is able to be completed: Low clearance tree branches, overhanging wires /powerlines, roads made of dirt or mud. Regardless of notice, access to site needs to be safe, unrestricted and achievable.
- Low clearance vehicles having less carrying capacity, can result in extra deliveries being required to get the order volumes to site compared to standard trucks.
- Clear access to the block is needed – minimum 1.5m width – without obstacles being present such as piles of earth, reo, formwork, trenches etc.
- Space to place delivery including tie down must be available at the front of site or the closest clear access point to vehicle parking space.
- Deliveries cannot be completed “at the back of the block”.
- Placement of deliveries on “next door blocks” or nature strips etc will be performed only at customers request and with customers taking full responsibility.
- Unipod allows 45 minutes for delivery including tie down. Requests to wait, failed deliveries, late cancellations will be charged as demurrage at appropriate rates.
- Any codes for gate locks must be advised of when placing order.

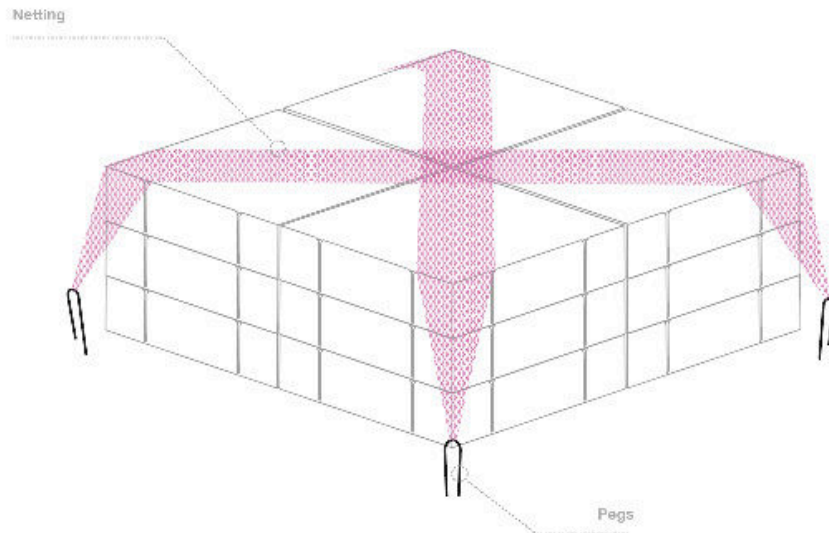

### Recycling Clean Up

- Reasonable access via paved/safe roads to approach site is required, including access to site through multi-unit developments.
- All scrap pods and any offcuts are to be placed into the bags provided by the supplier and secured at the front of site by approved method.
- Full scrap pods are to be secured at front of site by approved method to avoid being blown off-site. Do not place reo, wood, stones and so on to secure.
- All recyclable EPS is to be kept separate from other materials. Only clean EPS waste will be collected from the site. Bags containing products other than EPS will not be collected including EPS covered in mud, concrete or any other contaminants.
- Filled EPS recycling bags and full pods for recycling will not be picked up if not placed at front of site.
- Collections unable to be completed due to a concrete pour being conducted will be treated as a failed collection requiring rebooking.
- Unbagged material will not be collected.
- Only Unipod EPS material will be collected.
- Material cannot be recycled after extended exposure (2 months) to the elements. This product will not be collected.
